AI insights: what drives prices, and can we predict spikes?

state_name

All

Test Spikes	Model Warnings	Model Hits	Model Precision	Model Recall	Rule Warnings	Rule Hits	Rule Precision	Rule Recall
200	39	19	48.72%	9.50%	200	92	46.00%	46.00%

The LightGBM model ranks risk well (ROC AUC 0.96), but a simple rule, “spike if the price 30 minutes ago was over $300”, catches more spikes at the same precision. The test months were much quieter than the winter it trained on. Next: add AEMO pre-dispatch forecasts and more years of data.
